FCC Chairman Michael Powell Federal Communications Commission 445 12th Street SW Washington, DC 20554

FCC Chairman Powell:

As a concerned individual, I am writing to express my opposition to the Department of Justice s request that all new Internet communication services be required to have built-in wiretapping access.

I do not believe this requirement is necessary. Longstanding laws already require Internet Service Providers and Internet telephone companies to allow the FBI to conduct surveillance. The FBI is going far beyond these existing powers by trying to force the industry to actually build its systems around government eavesdropping. It is the equivalent of the government requiring all new homes be built with a peephole for law enforcement to look through.

I am very concerned that this requirement represents an end-run around Congress. Lawmakers, after extensive deliberations, set up boundaries for how the FBI can collect information between sources like phone companies and data sources like e-mail. The FBI s aggressive and expansive reading of the law would bypass the legislative process to alter that careful balance.

I understand that by requiring a master key to our personal communications, the government is creating the very real potential for hackers and thieves or even rogue government agents to access our personal communications. Past efforts to provide this sort of backdoor access have not been successful and only created a rich opportunity for hackers.

Once again, I urge you to oppose the dangerous suggestion of the Department of Justice that our new Internet communication technologies should have built-in wiretapping.

I look forward to hearing your thoughts on this matter.

Sincerely,

Robert D. Wheeler, Ph.D

March 18, 2004

FCC Chairman Michael Powell Federal Communications Commission 445 12th Street SW Washington, DC 20554

FCC Chairman Powell:

As a concerned individual, I am writing to express my opposition to the Department of Justice s request that all new Internet communication services be required to have built—in wiretapping access.

This requirement is unnecessary. Longstanding laws already require Internet service providers and Internet telephone companies to allow authorised surveillance. The FBI is going far beyond these existing powers by trying to force the industry to actually build its systems around government eavesdropping. This proposal is analogous to requiring that all new houses be built with a peephole for law enforcement to look through.

This proposal constitutes an end-run around Congress. Legislators, after extensive deliberations, defined bounds on the ways in which the FBI can collect information from data feeds. The FBI s aggressive and expansive reading of the law would bypass the legislative process to alter that careful balance.

By requiring a master key to our personal communications, the government is creating the very real potential for hackers and thieves or even rogue government agents to access our personal communications.

Once again, I urge you to oppose the dangerous suggestion of the Department of Justice that our new Internet communication technologies should have built-in wiretapping.

I look forward to hearing your thoughts on this matter.

Sincerely.

FCC Chairman Powell:

As a concerned individual, I am writing to express my opposition to the Department of Justice s request that all new Internet communication services be required to have built-in wiretapping access.

What do we stand for? What are we supposed to be having our young men dying to protect? I thought we valued freedom and democracy. I do not want this nation to become a police state. These actions are not necessary, they are the actions of people who despise and mistrust the American people. This is not about making us safer. If they want to make us safer they could do things like make the ports less vulnerable to attack.

I do not believe this requirement is necessary. Longstanding laws already require Internet Service Providers and Internet telephone companies to allow the FBI to conduct surveillance. The FBI is going far beyond these existing powers by trying to force the industry to actually build its systems around government eavesdropping. It is the equivalent of the government requiring all new homes be built with a peephole for law enforcement to look through.

Past efforts to provide this sort of backdoor access have not been successful and only created a rich opportunity for hackers.

Once again, I urge you to oppose the dangerous suggestion of the Department of Justice that our new Internet communication technologies should have built-in wiretapping.

I look forward to hearing your thoughts on this matter.

Sincerely,

Stephen Wathen

FCC Chairman Michael Powell Federal Communications Commission 445 12th Street SW Washington, DC 20554

FCC Chairman Powell:

As a concerned individual, I am writing to express my opposition to the Department of Justice s request that all new Internet communication services be required to have built-in wiretapping access.

I do not believe this requirement is necessary. Longstanding laws already require Internet Service Providers and Internet telephone companies to allow the FBI to conduct surveillance. The FBI is going far beyond these existing powers by trying to force the industry to actually build its systems around government eavesdropping. It is the equivalent of the government requiring all new homes be built with a peephole for law enforcement to look through.

I am very concerned that this requirement represents an end-run around Congress. Lawmakers, after extensive deliberations, set up boundaries for how the FBI can collect information between sources like phone companies and data sources like e-mail. The FBI s aggressive and expansive reading of the law would bypass the legislative process to alter that careful balance.

I understand that by requiring a master key to our personal communications, the government is creating the very real potential for hackers and thieves or even rogue government agents to access our personal communications. Past efforts to provide this sort of backdoor access have not been successful and only created a rich opportunity for hackers.

Once again, I urge you to oppose the dangerous suggestion of the Department of Justice that our new Internet communication technologies should have built-in wiretapping.

I look forward to hearing your thoughts on this matter.

Sincerely,

Halina Just

FCC Chairman Powell:

As a concerned individual, I am writing to express my opposition to the Department of Justice s request that all new Internet communication services be required to have built-in wiretapping access.

Are we now a police state? This requirement actually decreases our security. Once again, in the guise of fighting terrorism, the Ashcroft Justice Department seeks to criminalize the activities of ordinary citizens.

I do not believe this requirement is necessary. Longstanding laws already require Internet Service Providers and Internet telephone companies to allow the FBI to conduct surveillance. The FBI is going far beyond these existing powers by trying to force the industry to actually build its systems around government eavesdropping. It is the equivalent of the government requiring all new homes be built with a peephole for law enforcement to look through.
